

# LESSON #1

1

Find the exact matching shapes and color them accordingly.

**4** Solve the problem.

A family went to a restaurant to celebrate mom's birthday. Each of them chose different dishes and drinks. Your task is to find out what they each ate and drank. To solve this puzzle you have to look at the clues and fill in the table.

To solve this logic game put an 'X' where there is a relation and '-' where there isn't.

	Second dish					First dish					Drinks				
	Sushi	Quesadilla	Turkey with mashed potatoes	Pizza	Tuna with black rice	Chicken soup	Broccoli soup	Goulash soup	Mexican soup	Strawberry soup	Pepsi	Water	Tomato juice	Red wine	White wine
Sonia (mom)															
Robert (son)															
Jeff (dad)															
Maria (granny)															
Sophia (daughter)															

- The children didn't drink any alcohol because they are young.
- Tuna was a good choice after the broccoli soup.
- The Mexican dishes were also delicious together.
- Sonia usually drinks a glass of red wine if they are in a restaurant. She doesn't like goulash because it's too spicy for her, and she also doesn't like Mexican food.
- The child who drank Pepsi chose something Italian.
- Maria drank some water. She didn't order fish or poultry but she likes Japanese cuisine and spicy food.
- Sophia prefers poultry to fish and likes fruits, too.
